Exercise 3 (a)

a. Let $\mathbf{X} = (X_1, \dots, X_n)'$ be a random vector with joint moment generating function $M_{\mathbf{X}}(\mathbf{t})$. In class we discuss this theorem: Let $M_i(\mathbf{t}) = \frac{\partial M_{\mathbf{X}}(\mathbf{t})}{\partial t_i}$, $M_{ii}(\mathbf{t}) = \frac{\partial^2 M_{\mathbf{X}}(\mathbf{t})}{\partial t_i^2}$, and $M_{ij}(\mathbf{t}) = \frac{\partial^2 M_{\mathbf{X}}(\mathbf{t})}{\partial t_i \partial t_j}$. Then, $EX_i = M_i(\mathbf{0})$, $EX_i^2 = M_{ii}(\mathbf{0})$, and $EX_iX_j = M_{ij}(\mathbf{0})$. Prove this theorem when n = 2.

Exercise 3 (b)

a. Suppose
$$U \sim \Gamma(\alpha, \beta)$$
, with $\alpha > 0, \beta > 0$ and let $Y = c^U$. Find the probability density function of Y .

$$F_{Y}(y) = P(Y \leq y) = P(e^{y} \leq y) = P(U \leq h_{y}) = F_{U}(h_{y})$$

$$f(y) = \frac{1}{y} f_{U}(h_{y}) = \frac{1}{y} \frac{(h_{y}y)^{2-1} - h_{y}/f}{\Gamma(\alpha) f^{2}}$$
